

So what's happening On Polkadot?

- 1. Fast and predictable block time**
- 2. Provable finalization**
- 3. Shared security**
- 4. Scalability**
- 5. Guaranteed message-passing across chains (allows composability)**
- 6. Heterogenous sharding means blockchains can be customized for applications**

Example 1: Token Teleporting

Example 2: Statemint / Statemine (Asset-Specific Parachain)

Example 3: Collectives

Example 4: HydraDX

Example 5: Moonbeam

Example 6: Interlay

Example 7: Zeitgeist

Example 8: SubSocial
